Summary

I'm Sebastian. I'm a Frontend Web Developer with 3+ years of experience building responsive, dynamic, and scalable web applications for projects of all sizes. Skilled in modern frontend technologies and REST API integration, I focus on delivering clean, efficient, and user-friendly interfaces. Open to collaboration and always ready to bring ideas to life—let's connect and build something impactful together.

Skills

HTML5, CSS, SASS/SCSS, Javascript, React Js, Next Js, React Native, Node Js, MongoDB, PHP Laravel, Express Js, Tailwind CSS, Bootstrap, Vue Js, MySQL, Git, Shopify development, Product page structure.

Education

CodeMasters Bootcamp Program Sep 2023 – Dec 2023 | Fullstack Development

- Study and explore frontend mobile development material using the React Native framework, back end development material using Node JS with Express JS, and deepen website development material using React JS.
- Create a mobile application project as a final project in React Native material by forming a development team.

Universitas Teknologi Yogyakarta Sep 2017 – Oct 2022 | Information System

Learn about the workflow that exists in the system with information that has value. Develop an application that contains an information system with a clear structure and can be implemented in business. Understanding and experience to develop websites using HTML, Javascript, CSS, PHP and MySQL programming.

Thesis | Monjali Petshop Web

The final project in college is to create a sales website for a pet shop which can be implemented with a workflow that is in line with company sales from creating data structures to creating web based applications. Built using HTML, CSS, PHP, and styling with Bootstrap.

Experience

PT Top Four Asia Indonesia x The Blue Space Australia Jul 2024 – Feb 2026

Fullstack Developer

- Led UI and layout restructuring using modern responsive design standards, resulting in a more intuitive and user-centric browsing experience.
- Implemented SEO-optimized website structure and semantic markup to increase search engine discoverability and improve search insights.
- Developed and refined modular Shopify product components to create a scalable, maintainable, and conversion-focused product page structure.
- Collaborated with designers and stakeholders to translate business and user requirements into high-quality web solutions.
- Maintained clean, reusable, and well-structured code to support long-term scalability and easier feature development.

PT ASI Pudjiastuti (Susi Air) Oct 2023 – May 2024

Fullstack Developer Javascript

- Diagnosed and resolved frontend and backend issues to maintain website stability and improve overall system reliability.
- Conducted routine maintenance and performance checks to minimize bugs, enhance security, and prevent data integrity issues.
- Developed, improved, and maintained web features in alignment with product needs and technical best practices.
- Managed API integration and database maintenance to support seamless data exchange and scalable application architecture.

PT Medika Digital Nusantara Jul 2023 – Sep 2023

Freelance Customer Service (Technical)

- Responding to client queries in a timely and accurate way, via phone, email or chat.
- Identifying client needs and helping customers use specific features.
- Communicate with the development team to improve and update the features that clients want.
- Update our internal databases with information about technical issues and useful discussions with clients.
- Follow up with clients to ensure their technical issues are resolved.
